INSULATION GUIDE >>

Which Insulation is right for you?

FLEECE

Perhaps the most common, is a lightweight option that is warmer than cotton/foam linings and still less bulky than some insulations.

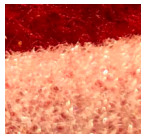

Tillman Part #s: 1404, 1412, 1425, 1438

PILE

Thicker heavyweight synthetic wool material.

Tillman Part #: 1450

COTTON/FOAM

Lightweight, economical option. Provides warmth and it will absorb moisture.

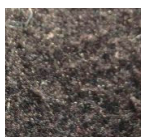

Tillman Part #: 1578

COLD BLOCK™

Tillman's own insulation creation. It consists of a poly/cotton blend that keeps hands warm.

Tillman Part #s: 1568, 1573, 1581, 1584, 1586

POLAR FLEECE

Soft napped insulating fabric made from polyester with moderate warmth.

Tillman Part #s: 1581, 1584, 1586

ACRYLIC SHELL

Light weight synthetic with minimal warmth that absorbs moisture.

Tillman Part #s: 1772, 1773

THINSULATE™

Breathable and moisture-resistant insulator. The fibers of Thinsulate™ are more effective at trapping air and keeping hands warm while allowing moisture to escape. The colder the temperature, the higher gram insulation the user will want. However, the higher the gram, the less flexibility they will have.

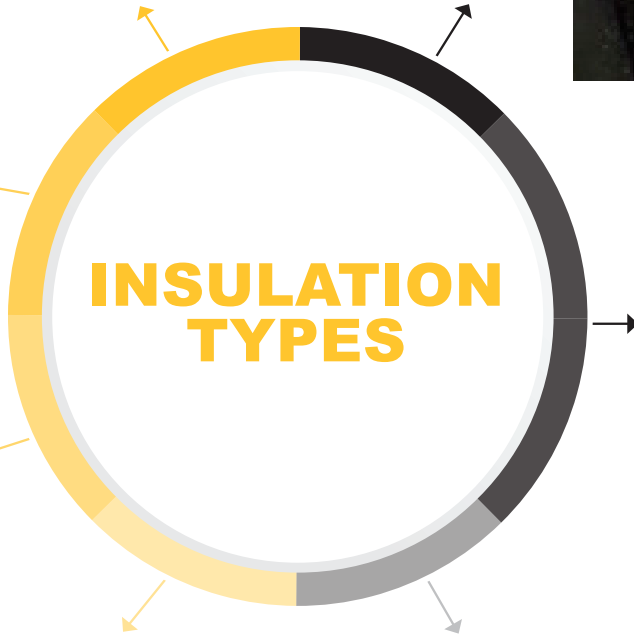

- **40-gram** for cool conditions or high activity levels
- **100-gram** for colder conditions or lighter activity levels

40 GRAM

Tillman Part #s: 1414CW, 1468, 1469, 1485, 1486, 1495

100 GRAM

Tillman Part #s: 865, 1403, 1419, 1565, 1567, 1590, 1592
