# OilX™ Gloves

Let's face it, when working a tough job in wet, oily and greasy conditions, no one likes to feel liquid seep through their leather gloves. To combat this, Tillman is introducing OilX™, a molecular additive developed for Tillman that repels oil, grease and liquids from penetrating leather and reaching the hands.

Tillman's OilX™ is added during the tanning process, not a coating sprayed on when the glove is manufactured. Adding OilX™ during the tanning process allows the additive to be fully infused into the leather for complete penetration and maximum protection, keeping oil and liquids from soaking through.

OilX™ causes oil and liquids to bead off the leather, keeping hands protected, clean and dry.

@eg\_fabworks

Glide patch resists heat buildup and allows added protection when MIG welding.

Oil and water will not penetrate the leather with OilX™.

Para-aramid lining offers high strength, additional resistance to abrasion and is non-conductive.

Keystone thumb maximizes flexibility and minimizes thumb fatigue.

WARNING: Leather products can expose you to chemicals including Chromium (hexavalent compounds), which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to [www.p65warnings.ca.gov](http://www.p65warnings.ca.gov).
